

## Texas Star Flour Mills - 21<sup>st</sup> and Water

Founded by John and Gustav Reymershoffer in 1879, the Texas Star Flour Mills was the largest plant of its kind. It could mill 125 barrels of flour a day with its 137 horsepower engine. The facility was designed by an unknown architect with Nicholas Clayton serving as a consultant. It suffered some damage from the 1900 Storm, but was repaired. It was demolished ca. 1974.
